EDUCATION

S.R.M INSTITUTE OF SCIENCE AND TECHNOLOGY

Computer Science B.tech
GPA: 9.47

Chennai,Tamil Naidu
August/2024 - April/2028

Sunbeam Lahartara

PCM 12
Percentage: 82%

Varanasi,Uttar Pradesh
April/2022 - March/2023

EXPERIENCE

IEEE GRSS | Member

Chennai,Tamil Naidu | August/2025 - Present

I developed an AI/ML module for a studentcompany matchmaking app using a small learning model to analyze student profiles, academic records, and uploaded documents. I implemented intelligent filtering algorithms to recommend suitable companies based on students skills, marks, and certifications, while also designing data preprocessing and scoring pipelines to enhance the accuracy of recommendations and overall user experience.

SKILLS

Programming Languages: C++, C, JAVA, PYTHON, HTML, CSS
Libraries/Frameworks: JavaScript, React, Tailwind CSS, Scikit-learn, PyTorch, Matplotlib, Seaborn, LLM'S, Machine Learning
Tools / Platforms: Flask, PyTorch, Scikit-learn, TensorFlow, Jupyter, Git
Databases: MongoDB

PROJECTS / OPEN-SOURCE

Green AI | [Link](#)

Python | PyTorch | U-Net | Image Processing

Developed a U-Net-based machine learning pipeline to detect saplings and estimate survival rates from drone imagery
Implemented geospatial visualization and parallel image analysis for scalable monitoring of afforestation efforts
Achieved accurate localization of dead saplings, contributing to environmental conservation initiatives

AuraCare Hospital Management System | [Link](#)

React/MongoDB/Node.js

Built a full-stack Hospital Management System using React 19, Node.js, Express.js, and MongoDB (MERN).
Implemented JWT authentication, bcrypt password hashing & Role-Based Access Control for secure login (Admin/Doctor/Patient).
Developed Patient Portal & Admin Dashboard with responsive UI/UX, smart appointment booking, and doctor management.
Integrated AI chatbot for automatic department recommendations based on patient symptoms.
Enabled Cloudinary image uploads, RESTful APIs, and real-time notifications using Notistack & Axios interceptors.

NLP Fusion | [Link](#)

Python | Logistic-Regression | scikit-learn | Data Visualization|Naive Bayes

Developed a collection of NLP projects including Spam SMS detection, Fake News classification, Movie Genre multi-label classification, Sentiment Analysis of restaurant reviews, and Stock Market Sentiment Analysis. Implemented end-to-end pipelines with text preprocessing, feature engineering (TF-IDF, embeddings), and machine learning models (Naive Bayes, Random Forest, XGBoost, LSTM). Achieved high accuracy (up to 99%) and deployed models using Flask/Streamlit for real-world applicability.

Kala-Kart | [Link](#) *TypeScript, Tailwind CSS, React-Vite,Python 3.8+, Pandas, Flask-CORS,Google Gemini AI, NLP, RAG*

Kala-Kaart: AI-Powered Artisan Discovery Platform

Developed a full-stack platform connecting 50,000+ traditional Indian artisans with customers using Google Gemini AI for natural language search and discovery.

Technical Implementation:

Built React/TypeScript frontend and Flask REST API backend with RAG-based conversational AI

Implemented multi-language NLP (Hindi/English) with intent classification and entity extraction

Integrated Firebase Authentication, Firestore database, and Pandas for real-time data processing

Developed analytics dashboard tracking 38 craft categories across 28 states with government ID verification

Impact: Reduced artisan discovery time by 80%; enabled zero-commission direct connections; processed complex queries like "Find pottery artists in Rajasthan" with 90% accuracy.

Stack: React 18, TypeScript, Flask, Python, Google Gemini AI, Pandas, Tailwind CSS

CERTIFICATIONS

- Exploratory Data Analysis for Machine Learning - **Coursera**
- Supervised Machine Learning: Regression - **Coursera**
- Oracle Cloud Infrastructure Generative AI - **Oracle**

HONORS & AWARDS

- Second Prize In GenAI Hackathon
